

2_DonorsChoose_EDA_TSNE - Working

February 28, 2020

1 DonorsChoose

DonorsChoose.org receives hundreds of thousands of project proposals each year for classroom projects in need of funding. Right now, a large number of volunteers is needed to manually screen each submission before it's approved to be posted on the DonorsChoose.org website.

Next year, DonorsChoose.org expects to receive close to 500,000 project proposals. As a result

How to scale current manual processes and resources to screen 500,000 projects so that they can
How to increase the consistency of project vetting across different volunteers to improve t
How to focus volunteer time on the applications that need the most assistance

The goal of the competition is to predict whether or not a DonorsChoose.org project proposal submitted by a teacher will be approved, using the text of project descriptions as well as additional metadata about the project, teacher, and school. DonorsChoose.org can then use this information to identify projects most likely to need further review before approval.

1.1 About the DonorsChoose Data Set

The `train.csv` data set provided by DonorsChoose contains the following features:

Feature	Description
<code>project_id</code>	A unique identifier for the proposed project. Example: p036502

`project_title` | Title of the project. **Examples:**

Art Will Make You Happy!

First Grade Fun

`project_grade_category` | Grade level of students for which the project is targeted. One of the following enumerated values:

Grades PreK-2

Grades 3-5

Grades 6-8

Grades 9-12

`project_subject_categories` | One or more (comma-separated) subject categories for the project from the following enumerated list of values:

Applied Learning
 Care & Hunger
 Health & Sports
 History & Civics
 Literacy & Language
 Math & Science
 Music & The Arts
 Special Needs
 Warmth

Examples:

Music & The Arts
 Literacy & Language, Math & Science

school_state | State where school is located ([Two-letter U.S. postal code](#)). **Example:** WY
project_subject_subcategories | One or more (comma-separated) subject subcategories for the project. **Examples:**

Literacy
 Literature & Writing, Social Sciences

project_resource_summary | An explanation of the resources needed for the project. **Example:**

My students need hands on literacy materials to manage sensory needs!

project_essay_1 | First application essay

project_essay_2 | *Second application essay* **project_essay_3** | Third application essay

project_essay_4 | *Fourth application essay* **project_submitted_datetime** | Datetime when project application was submitted. **Example:** 2016-04-28 12:43:56.245

teacher_id | A unique identifier for the teacher of the proposed project. **Example:** bdf8baa8fedef6bfeec7ae4ff1c15c56

teacher_prefix | Teacher's title. One of the following enumerated values:

nan
 Dr.
 Mr.
 Mrs.
 Ms.
 Teacher.

teacher_number_of_previously_posted_projects | Number of project applications previously submitted by the same teacher. **Example:** 2

* See the section Notes on the Essay Data for more details about these features.

Additionally, the `resources.csv` data set provides more data about the resources required for each project. Each line in this file represents a resource required by a project:

Feature	Description
id	A <code>project_id</code> value from the <code>train.csv</code> file. Example: p036502

Feature	Description
description	Description of the resource. Example: Tenor Saxophone Reeds, Box of 25
quantity	Quantity of the resource required. Example: 3
price	Price of the resource required. Example: 9.95

Note: Many projects require multiple resources. The `id` value corresponds to a `project_id` in `train.csv`, so you use it as a key to retrieve all resources needed for a project:

The data set contains the following label (the value you will attempt to predict):

Label	Description
project_is_approved	Approval flag indicating whether DonorsChoose approved the project. A value of 0 indicates the project was not approved, and a value of 1 indicates the project was approved.

1.1.1 Notes on the Essay Data

Prior to May 17, 2016, the prompts for the essays were as follows:

project_essay_1: "Introduce us to your classroom"

project_essay_2: "Tell us more about your students"

project_essay_3: "Describe how your students will use the materials you're requesting"

project_essay_4: "Close by sharing why your project will make a difference"

Starting on May 17, 2016, the number of essays was reduced from 4 to 2, and the prompts for the first 2 essays were changed to the following:

project_essay_1: "Describe your students: What makes your students special? Specific details about their background, your neighborhood, and your school are all helpful."

project_essay_2: "About your project: How will these materials make a difference in your students' learning and improve their school lives?"

For all projects with `project_submitted_datetime` of 2016-05-17 and later, the values of `project_essay_3` and `project_essay_4` will be NaN.

Assignment 2: Apply TSNE

If you are using any code snippet from the internet, you have to provide the reference/citations, as we did in the above cells. Otherwise, it will be treated as plagiarism without citations.

 In the above cells we have plotted and analyzed many features. Please observe the plots and

 EDA: Please complete the analysis of the feature: teacher_number_of_previously_posted_projects

Build the data matrix using these features

school_state : categorical data (one hot encoding)

clean_categories : categorical data (one hot encoding)

clean_subcategories : categorical data (one hot encoding)

teacher_prefix : categorical data (one hot encoding)

project_grade_category : categorical data (one hot encoding)

project_title : text data (BOW, TFIDF, AVG W2V, TFIDF W2V)

price : numerical

teacher_number_of_previously_posted_projects : numerical

 Now, plot FOUR t-SNE plots with each of these feature sets.

categorical, numerical features + project_title(BOW)

categorical, numerical features + project_title(TFIDF)

categorical, numerical features + project_title(AVG W2V)

categorical, numerical features + project_title(TFIDF W2V)

 Concatenate all the features and Apply TNSE on the final data matrix

 Note 1: The TSNE accepts only dense matrices

 Note 2: Consider only 5k to 6k data points to avoid memory issues. If y
